

### ***Press Release***

After almost a decade of research, years spent in the studio with the participation of various guest musicians and stunning recording sessions, we are proud to present the studio-band "Guru Meditations" from the darkest of Denmark with a profound cultural clash that'll cross both inner and external borders.

Get ready for a mixed cuisine of ground-shaking bass, deep dub vibes, African rhythms, middle eastern influences with a dash of electronica style synthesizers on top.

This album will bring you tranquility and also bring ethnic-dub to newer standards and heights. It is a great meditative dub album, and a must-have in your music collection. No one else will play an egg-slicer for you!

### ***Biography***

Jørgen Traun, born 1968, is an electronic composer, arranger and producer. He sees himself as a patient and curious person who makes music with others or alone. He uses a process oriented way of making music focusing on the creative process, as opposed to a result oriented way of working. This method results in some very unique music tracks, which tell a story.

Joachim Michaelis, born 1973, is a musician, producer and sound engineer who has been working with computers and music since the late 80s, experimenting with various styles and genres. Being a programmer he also creates his own sound plug-ins for the tracker software Jeskola Buzz, which he used for this and many other productions.
